

## PROPOSED PROGRAM RE: PERSONS INJECTED WITH PLUTONIUM 1945-47

A. Actions to be initiated immediately and completed within three weeks.

1. Representatives of the Division of Biomedical and Environmental Research (BER) and of the Contractor shall inform attending physicians of the four surviving patients and the family of the exhumed deceased patient of the need for disclosure to the patients or their families of the nature of the injections and the subsequent studies conducted on them. Disclosure shall be made in such a manner that it will not interfere with the physician-patient relationship. The attending physician will determine the manner of disclosure and the recipient of the information, whether it be the patient, a relative or friend.
2. The Director, BER, shall inform the directors of institutions, involved in the performance of studies on the above patients, of the need to have future studies of these subjects reviewed by their institutional review committees. All available material information shall be presented to the institutional review committees. The institutions will abide by the findings of such committees in the matter of procedures for informed consent, the conduct of further studies on the patients and the guarding of anonymity of the patients in the publication of scientific results.

3. The Atomic Energy Commission will seek to discover all available information regarding the matter. This inquiry will take the form of a search for documentation of events and the interview of interested parties. All interviews will be conducted on a regularized basis by a team(s) of BER and Inspection Division representatives. The detailed plans and procedures will be formulated by these two Divisions in consultation with the Office of the General Counsel. This investigation shall be conducted as rapidly and completely as possible.

B. Actions to be initiated immediately and completed within six weeks.

A committee of three disinterested medical scientists shall be appointed by the President of the Institute of Medicine (or some other appropriate outside party) to review the BER-Inspection Division report and all material information concerning the patients and studies as well as the involvement of the Manhattan Engineering District, Atomic Energy Commission and their contractors in this matter. The committee shall prepare a report suitable for public release.

C. Actions to be taken during the next seven weeks.

1. Upon completion of the committee report, a public statement of disclosure will be issued by the Commission. Earlier public statements will be prepared in response to inquiries.
2. In a manner to be determined by the Office of the General Counsel, the estates of deceased patients shall be informed of the nature of the injections and studies conducted on the patients.
